Software Engineer | Manchester | ahmedysatti@gmail.com | [Github](#) | [LinkedIn](#) | 07857 942 285

SUMMARY

Software Engineer with experience building full-stack applications using TypeScript, React and AWS. Developed Hunter, a cross-platform job application tracking application to help job seekers with their job search. Currently seeking frontend, backend and full-stack engineering roles.

TECHNICAL SKILLS

Languages

- JavaScript/TypeScript
- Go

Frontend

- React
- React Native
- Tailwind CSS
- HTML & CSS

Backend

- Node.js

Cloud

- Amazon Web Services (AWS)

Version control

- Git

Testing

- Jest
- Maestro (E2E testing)

Infrastructure & CI/CD

- Docker
- AWS CDK/AWS Cloudformation
- Github Actions

EXPERIENCE

Associate Software Developer | Tech Returners

Engineered a full-stack software application following industry best practices to deliver high-quality, production-ready solution.

- Architected a comprehensive project roadmap from a detailed technical specification to ensure all business requirements and deadlines were met for a MVP.
- Developed and launched an event platform within a four-week time frame, enabling businesses to create events and allowing end-users to manage sign-ups and integrate them with personal calendars.
- Implemented secure authentication and user account management features, enabling protected access for all platform users.

Trainee Software Engineer | Northcoders

Joined company's bootcamp to learn about software engineering. In 4 weeks, gained fundamental knowledge about programming, successfully completed subject related katas

- Mastered fundamental programming concepts and applied them to solve complex algorithmic challenges through consistent completion of subject-related katas.
- Architected and deployed a comprehensive backend REST API using Node.js, Express.js, and PostgreSQL, successfully hosting the service on Render.
- Developed a responsive frontend interface using React to consume internal RESTful APIs, ensuring efficient data flow and a high-quality user experience.

- Utilized Test-Driven Development (TDD) with Jest to ensure code reliability and maintainability.
- Co-developed "Okay Play," a multiplayer board web game, implementing real-time turn-based logic and a custom lobby system for 2 - 4 players.

PROJECTS

Hunter | [Github repository](#) | React Native, Expo, TypeScript, Jest, Tailwind, AWS

- Built a job tracking application for Android and the Web using React Native, TypeScript and AWS
- Implemented OAuth authentication with Google and Facebook
- With every job recorded, follow up notifications are sent from the Android app two and four weeks after the submission date
- Designed to centralize and improve job application management from using a spreadsheet

Cycling events | [Github repository](#) | [Link](#) | TypeScript, React.js, AWS, Jest

- Designed a platform for a small business to advertise their events to the public using TypeScript, React and AWS
- Implemented user authentication and authorization for users to sign up to events and staff to add events onto the platform
- Integrated Google Calendar with the platform to allow users who signed up for events to add it to their calendars

Gomail | [Github repository](#) | Go, Google Cloud Platform (GCP)

- Designed and implemented a CLI tool to browse and search emails from a terminal using Go and GCP
